DETAILED ACTION

1. This Office Action is in response to the Amendment filed May 24, 2006. Claims 1-22 are now pending, wherein claims 1-20 are drawn to a pigmentable binder composition and claims 21-22 are drawn to a synthetic asphalt.

Allowable Subject Matter

2. Claims 1-22 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest references: Fujitani et al. (JP 01-242667) and Syrier et al. (EP 0 179 510 B1).

A pigmentable binder composition comprising		Summary of Claim 1
A	a petroleum resin	
B	a lubricating oil and/or a lubricating oil extract	
C	0.05-less than 3 wt % of amide additive of the general formula $R^1\text{-CO-NH-(CH}_2\text{)}_x\text{-NH-CO-R}^2$	

Fujitani et al. disclose a composition for road marking material, comprising (A) 10-20 wt% binder resin, (B) 0.5-5 wt% mineral oil, (C) ethylenebisstearic acid amide,

Art Unit: 1713

and (D) 1-10 wt% coloring pigment, wherein the binder resin can be a maleic acid rosin or a petroleum resin (Means to Solve the Problem). Inclusion of coloring pigments implies that the composition is pigmentable. Attention is drawn to Examples 1 and 2, wherein amount of ethylenebisstearic acid amide is calculated to be 7.7 wt% for Example 1 and 14.3 wt% for Example 2. Thus, Fujitani et al. do not teach or fairly suggest a pigmentable binder composition comprising (A) a petroleum resin, (B) a lubricating oil and/or a lubricating oil extract, and (C) from 0.05 to less than 3 wt % of $R^1\text{-CO-NH-(CH}_2\text{)}_x\text{-NH-CO-R}^2$.

Syrier et al. disclose a pigmentable binder for asphaltic composition comprising (A) a mineral lubricating oil extract and (B) a petroleum resin, wherein the petroleum resin is modified with carboxylic acid, carboxylic acid anhydride, or hydroxy group (claims 1-9). Syrier et al. further disclose that the binder composition can contain 0.5-10 wt % of wax (page 2, lines 44-46 and 57-61). In comparing Claims 1-3 (and Comparative Example A (the present invention)), the asphalt compositions prepared from these binders (Examples 1-3) need to be heated in the order of 20°C lower than one prepared from the Comparative Example A to obtain the same workability.

Binder	Ex. 1	Ex.2	Ex.3	Comp.Ex.A
Mexphalte CP2 (wt%)	99.0	98.5	98.0	100
ethylene bis-stearamide (wt%)	1.0	1.5	2.0	0
workability temp. (°C)				
synthetic asphalt	214	224	214	234
green synthetic asphalt	226	230	218	245
red synthetic asphalt	243	238	233	255

Art Unit: 1713

Thus, Syrier et al. do not teach or fairly suggest a pigmentable binder composition comprising (A) a petroleum resin, (B) a lubricating oil and/or a lubricating oil extract, and (C) from 0.05 to less than 3 wt % of $R^1\text{-CO-NH-(CH}_2\text{)}_x\text{-NH-CO-R}^2$. ✓

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
